

AVIATION SAFETY RESEARCH PROJECT

We are seeking pilots with instrument ratings or who are close to completing their instrument training to participate in a research project.

We will pay you \$ 220 to fly our simulator.

We are investigating the effect of food intake on pilot performance. You will be asked to fly simulate cargo missions over two days (not necessarily consecutive). The flights will be recorded by the simulator and by videotape and you will be asked to wear a glucose monitor during the flights.
