

# Resilience and Preparedness to Strategic Terrorism

August 10, 2009

Ben Sheppard, Ph.D.

Senior Associate, Institute for Alternative Futures,  
Adjunct fellow, Potomac Institute for Policy Studies

# Interdisciplinary approach

- Political science:
  - Historical and journalistic account of the effects of terror on populations but does not address how successful strategic terrorism is in generating terror
- Behavioral sciences:
  - More rigorous but very focused, lacking the political context

.....Bring the two together.

# Strategic Terrorism

- Use of terror to coerce political system
  - “Independent deliberate acts of **violence**, or threats of violence **against a populace**, intended to produce a particular psychological effect - **terror** - on the assumption that, second, this will **influence** the target’s whole **political system** through **shifting its attitudes and behaviour.**” (Lawrence Freedman, 2005)
- Terrorism designed to cause dislocation and disorientation of society

Lawrence Freedman, ‘Strategic Terror and Amateur Psychology’, *The Political Quarterly*, Vol. 76, No. 2, April (2005), pp 161-170

# Risk Analysis ...in terrorism

Risk Perception

Public's prior experience of terrorism [e.g. 2<sup>nd</sup> Intifada]  
knowledge of devices - lethality [e.g. RDDs, BWs]

Social Amplification  
of Risk

Emergency services/government response  
[e.g. 1995 Sarin attack, Mumbai 2008]

Trust

Adherence to government advice [CBR attack]

Risk Characterization

Risk profile of device(s)/delivery: lethality  
[e.g. 2001 anthrax]

Risk Communication

Reduce the terror and adverse changes in public's  
behaviors and attitudes (elicit desired responses)

**Mitigate adverse behavioral responses from  
terrorism and as a tool of political coercion**

**UNKNOWN RISK:**  
Not observable,  
Unknown to those exposed,  
Effect delayed,  
New risk,  
Risks unknown to science

**CBRN**

**NON DREAD RISK:**  
Controllable,  
Not global catastrophic,  
Consequences not fatal,  
Equitable,  
Individual,  
Low risk to future generations,  
Easily reduced,  
Risk decreasing,  
Voluntary,  
Doesn't affect me

**DREAD RISK:**  
Uncontrollable,  
Dread,  
Global catastrophic,  
Consequences fatal,  
High risk to future generations,  
Risk increasing,  
Not equitable,  
Catastrophic,  
Involuntary,  
Not easily reduced,  
Affects me

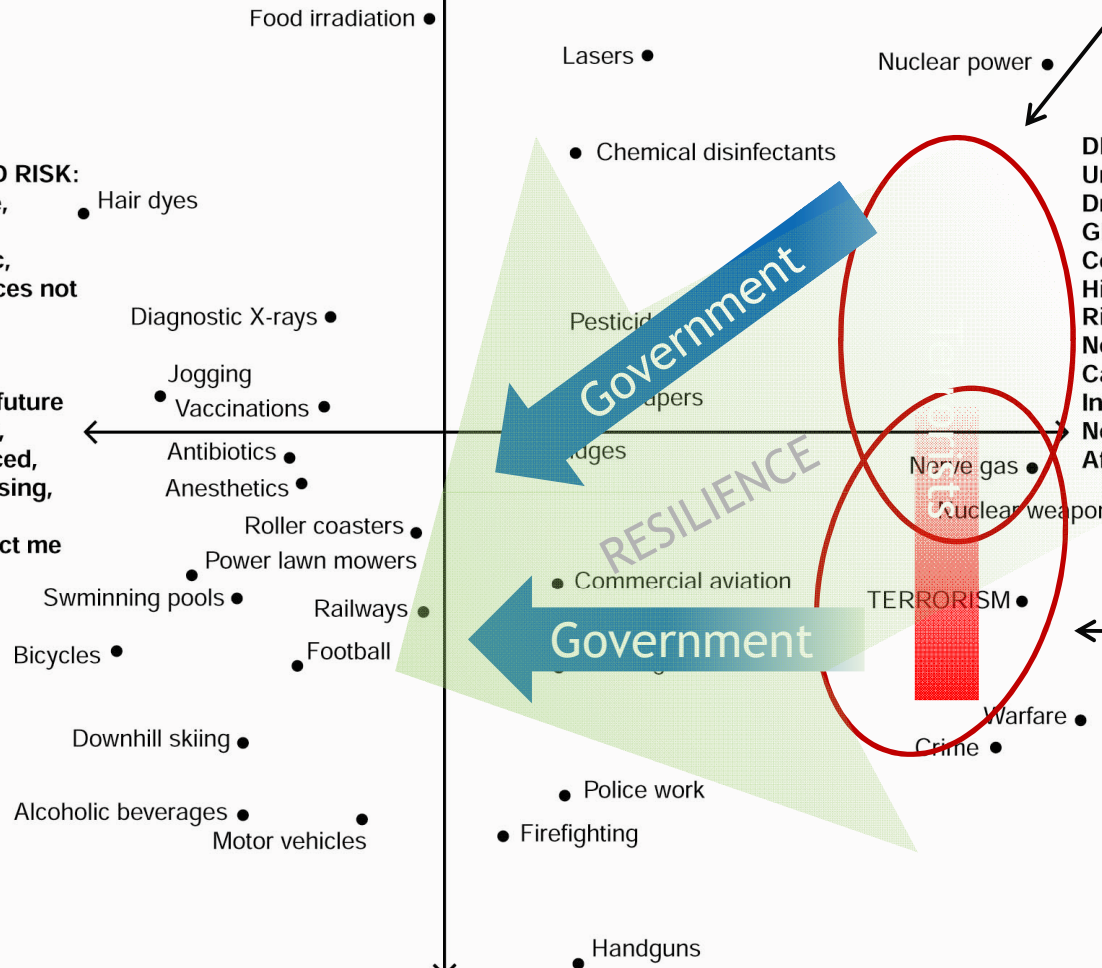

**Government**

**RESILIENCE**

**Government**

**Conventional/  
non-CBRN**

**KNOWN RISK:**  
Observable,  
Known to those exposed,  
Effect immediate,  
Old risk,  
Risks known to science
